- All EDI messages have been developed on basis of standard EDI Ecommerce module. No customizing had been required.
- VDA ASN's can be exported by Master Bill of Lading Number (German: "Sendungsladungsbezugsnummer"). Therefore, a fully VDA compliant processing is possible.
- Segment sequences are compliant to the respective EDI standards. This creates customer value by using simple and therefore unexpensive mappings in the EDI supplying software.

● ***EDI Ecommerce and printed documents (EDI standards)***

- Some messages require standardized printed documents. Using rapid-e's PROGRESS based ConnectivityPack bolt-on module, these documents can be printed with the StreamServe output management system without customizing of report programs. All EDI specific data are exported by the ConnectivityPack module.
- Since no customizing was necessary and only standard functions have been used, all EDI "turnaround data" are automatically available for printed documents.
- Full set of printed standard VDA transport documents available for StreamServe output management system when using rapid-e's ConnectivityPack bolt-on module to export MFG/PRO data for StreamServe.
- To learn more about the functionality of the ConnectivityPack please see [www.rapid-e.de](http://www.rapid-e.de).
